DETAILED ACTION

This Office Action is in response to the amendment filed November 30, 2007 for the above identified patent application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 and 5-12 are rejected under 35 U.S.C. 102(b) as being anticipated by GB 2 352 484 (GB '484).

Referring to Figures 3 and 5, GB '484 discloses examples of a rolling, sliding part made from a bearing steel, a rolling, sliding surface thereof having a surface layer portion which is 56 to 64 in Rockwell C hardness, up to 12 vol. % in retained austenite content.

GB '484 does not clearly disclose 4 to 5 degrees in the X-ray half value width of martensite, however it is submitted that the manufacturing steps of forming the bearing is the same steps used in forming the claimed bearing. For example, the bearing of GB

Art Unit: 3682

'484 is formed using a secondary tempering between the temperatures of 150 to 160 deg. C. Since the bearing of GB '484 is formed in the same manner as the claimed bearing, the bearing of GB '484 inherently has 4 to 5 degrees in the X-ray half value width of martensite.

There is reason to believe, based on the similarity of (material, structure, etc.), that the functional limitation(s) of the X-ray half value may be (an) inherent characteristic(s) of a bearing formed with the disclosed forming operations, such as secondary tempering. In accordance with *In re Best*, 562 F.2d 1252, 195 USPQ 430, 433 (CCPA 1977):

[W]here the Patent Office has reason to believe that a functional limitation asserted to be critical for establishing novelty in the claimed subject matter may, in fact, be an inherent characteristic of the prior art, it possesses the authority to require the applicant to prove that the subject matter shown to be in the prior art does not possess the characteristic relied on.

This "burden of rebutting [may be of] the PTO's reasonable assertion of inherency under 35 USC 102, or of prima facie obviousness under 35 USC 103" (195 USPQ at 432).

Accordingly, the burden is placed upon the applicant to prove that the limitation(s) in question is/are not (an) inherent characteristic(s) of the reference disclosure.

Conclusion

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
